3 May 2013

Dear Cathryn

Preparing Control Period 5 (CP5) price lists for the Variable Usage Charge (VUC)

I am writing in response to your letter to Paul Plummer dated 26 April 2013 requesting further information in relation to our proposed estimates of CP5 VUC rates. In particular, the impact of apportioning relevant variable usage costs using the methodology developed by our consultants, Serco. We are, of course, happy to provide further information in this respect. In addition to the information that you asked us to provide by 3 May, I am pleased to also be able to provide a complete draft CP5 price list on the alternative 'Serco' basis (see Appendix 2).

The remainder of this letter is structured as follows:

- Overall impact on rates and income;
- Impact by freight commodity type;
- Impact on individual vehicles;
- Appendix 1 – CP5 income forecast (with and without Serco); and
- Appendix 2 - Impact on draft CP5 price list.

Overall impact on rates and income

If vertical track and signalling variable usage costs (the two cost categories which in our VUC conclusions document¹ we proposed apportioning using the existing equivalent track damage equation) were apportioned using the equivalent track damage equation (measure of 'track friendliness'), developed by Serco, we estimate this would have the following impact on average VUC rates.

¹ Available at: [Closed consultations - Periodic review 2013 - Delivery plans - Network Rail](#)

Average Rates (2012/13 prices end CP5 efficiency)

	No Serco	With Serco	Variance (%)
Freight (£/KGTM)	1.8040	2.5146	39%
Passenger (p/vehicle mile)	11.5979	10.2447	-12%

This is broadly consistent with our initial analysis which indicated a significant increase in the average freight VUC rate and a moderate reduction in the average passenger rate.

We have also forecast what impact implementing the Serco equivalent track damage equation would have on the VUC income that we would receive from passenger, open access and freight operators in CP5. In summary, over CP5, we forecast that the impact would be that we would receive approximately £117m (2012/13 prices end CP5 efficiency) additional income from freight operators, which would be offset by a commensurate reduction in income from franchised passenger and open access operators.

Appendix 1 of this letter contains a more detailed forecast of VUC income in CP5, disaggregated by year, route and type of operator.

Impact by freight commodity type

As requested, we have also assessed the impact of introducing the updated equivalent track damage equation on each freight commodity type. The table, below, compares the average freight VUC rate, for each commodity type, before and after implementing the revised Serco methodology.

Average rates by commodity (£/KGTM, 2012/13 prices end CP5 efficiency)

Commodity	No Serco	With Serco	Variance (%)
Industrial Minerals	1.6382	2.8001	71%
Coal ESI	1.9552	3.3397	71%
Engineering Haulage	1.5309	2.6024	70%
Chemicals	1.1655	1.8338	57%
Construction Materials	2.0795	3.2205	55%
Coal Other	2.1417	3.3142	55%
Iron Ore	2.2760	3.4510	52%
Steel	1.9459	2.7602	42%
Biomass	1.9149	2.5537	33%
European Conventional	2.0100	2.6193	30%
Petroleum	1.5192	1.9329	27%
Other	2.1502	2.5681	19%
Enterprise	1.8512	2.2077	19%
General Merchandise	3.4925	4.1184	18%
Domestic Waste	2.1418	2.4452	14%
European Automotive	1.9626	2.2297	14%

Domestic Automotive	1.5662	1.7221	10%
Domestic Intermodal	1.5147	1.5356	1%
European Intermodal	1.6581	1.6759	1%
Mail and Premium Logistics	4.8354	4.7975	-1%
Royal Mail	1.9413	1.5268	-21%

As the, above, table illustrates the impact by commodity type varies considerably. However, consistent with our initial analysis, it indicates a very material increase in the average charge rate for bulk freight traffic.

We have also assessed (based on the mix and volume of freight traffic in 2011/12) the revenue impact of the, above, changes to the average charge rates for each freight commodity type (see table, below).

Revenue by Commodity (£m, 2012/13 prices end CP5 efficiency)

Commodity	No Serco	With Serco	Variance
Industrial Minerals	0.7	1.2	0.5
Coal ESI	14.4	24.6	10.2
Engineering Haulage	0.0	0.0	0.0
Chemicals	0.0	0.0	0.0
Construction Materials	8.6	13.3	4.7
Coal Other	1.3	2.1	0.7
Iron Ore	0.4	0.6	0.2
Steel	5.5	7.9	2.3
Biomass	0.8	1.1	0.3
European Conventional	0.2	0.2	0.1
Petroleum	2.2	2.8	0.6
Other	0.8	0.9	0.1
Enterprise	0.5	0.6	0.1
General Merchandise	0.0	0.0	0.0
Domestic Waste	0.4	0.5	0.1
European Automotive	0.1	0.1	0.0
Domestic Automotive	0.5	0.6	0.1
Domestic Intermodal	13.7	13.9	0.2
European Intermodal	0.6	0.6	0.0
Mail and Premium Logistics	0.0	0.0	0.0
Royal Mail	0.3	0.2	-0.1
Total	51.1	71.2	20.1

The, above, table indicates that, based on the mix and volume of freight traffic in 2011/12, approximately 86% of the additional income that we would receive from freight operators can be attributed to the ESI Coal (51%), Construction Materials (23%) and Steel (12%) commodity types.

Impact on individual vehicles

In order to assess the impact on the average VUC rates for each freight commodity type, it was necessary for us to recalculate VUC rates for individual vehicle types. Therefore, in Appendix 2 of this letter we have provided an updated CP5 VUC price list on the 'Serco' basis. We have also set out the impact of introducing the Serco equivalent track damage equation on individual VUC rates.

In summary, changes charge rates for individual freight vehicles range from a 26% reduction (for a tare EEEY wagon transporting 'Royal Mail') to a 140% increase (for a laden HOAA wagon transporting 'Industrial Minerals').

Changes to individual charge rates for passenger vehicles range from a 23% reduction (for a Mark 3 coach) to a 108% increase (for a Class 98/8 steam locomotive). If one excludes the lightly used passenger steam locomotives, the largest increase is 6% (for a Class 33/2 locomotive).

If you have any questions in relation to this letter please do not hesitate to contact me.

Yours sincerely

Peter Swatridge

Head of Regulatory Economics

APPENDIX 1 – CP5 INCOME FORECAST (WITH AND WITHOUT SERCO)
